Exp no:8. Top 5 Best-Selling Products

Aim: To find the top five best-selling products.

Algorithm:

1. Load the sales dataset.
2. Group products and sum quantities.
3. Sort in descending order.
4. Display the top five products.

Code:

```
import pandas as pd

data = pd.DataFrame({

    'product': ['Laptop', 'Mouse', 'Keyboard', 'Monitor', 'USB'],

    'quantity': [10, 25, 20, 15, 30]

})

result = data.groupby('product')['quantity'].sum()

print(result.sort_values(ascending=False).head(5))
```

Output:

Result:

Customer orders and product quantities were analyzed successfully.
